A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/1/2008 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Elden et al 6517482. In column 10, line 12, Elden discloses a wristwatch device for measuring glucose. The device places two electrodes on the skin, applies a modulating voltage between the electrodes, i.e. applies a field to the specimen, and detects the resulting current, to identify impedance. The impedance is then correlated to glucose levels. The only feature missing is the shape of the electrode. The examiner notes that the exact shape of the electrodes would have been a mere matter of design choice for one skilled in the art.

Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Susstrunk WO 01/26538. Susstrunk discloses a wristwatch device for measuring glucose that has an electrode, i.e. coil L, which is placed near the skin and the response

to stimulation from the coil is correlated to glucose levels. The only feature missing is the shape of the electrode. The examiner notes that the exact shape of the electrodes would have been a mere matter of design choice for one skilled in the art.

Claims 1-9, 11, 12, 14-18, 22-27, and 32 are allowable. Claims 1-9, 11, 12, 14, 15, and 32 define over the art in that none of the art has the first electrode as part of a resonant circuit that operates at the resonant frequency, as claimed. Claims 16-18 and 22--27 define over the art in that none of the art has the second electrode formed on both sides of the substrate, as claimed.

Claims 29-31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 29-31 define over the art in that none of the art has the second electrode as a ring electrode.
